[OnDemand EHS][®] consists of a primary corporate EHS portal, and if needed, subsidiary facility portals for each plant location within an organization. The EHS portal contains:

Regulatory Compliance Modules. With over 80 targeted and integrated modules, OnDemand EHS[®] is regarded as a comprehensive solution. Modules include, for example, VOC recordkeeping, air permit tracking, air emissions, stormwater, wastewater, electrical safety, safety audits, environmental audits, job safety analysis, coworker training, training content resources, hazardous waste, solid waste, greenhouse gas inventory, inspections, and more.

Key Benefits

- **Hosted by JE Compliance Services, Inc.** so there is not IT management cost.
- **Consolidates information** across the entire organization.
- **Promotes better visibility of potential liabilities** within each plant and across the entire organization.
- **Provides a tool for EHS managers** within a plant or that manage many plants to more efficiently manage data and documents.

Current Events. A service that delivers legal and regulatory updates daily or weekly drawn from federal, state, and local regulatory agencies rulemaking calendars. Environmental professionals cull through regulatory resources to deliver tailored articles. Over 90 agency web sites, including international entities, are tracked and categorized.

Compliance Calendars. Regulatory and plant-level compliance requirements and deadlines tracking, including reminders and alerts, maintained cooperatively by JECSEI with each client.

Audit Tools and Corrective Action Tracking. Keyed to regulatory requirements for the specific jurisdiction and plant-specific requirements, the audit system uses custom and stock checklists, corrective action lists, and follow-up task lists and delivers detailed and summary reports.
